IMPLEMENTATION:

- Define the Deck: Create a data structure to represent a deck of cards, including their ranks and suits. Initialize the deck with all the cards.
- Shuffle the Deck: Implement a shuffling algorithm to randomize the order of the cards in the deck. This ensures fairness and unpredictability in dealing the cards.

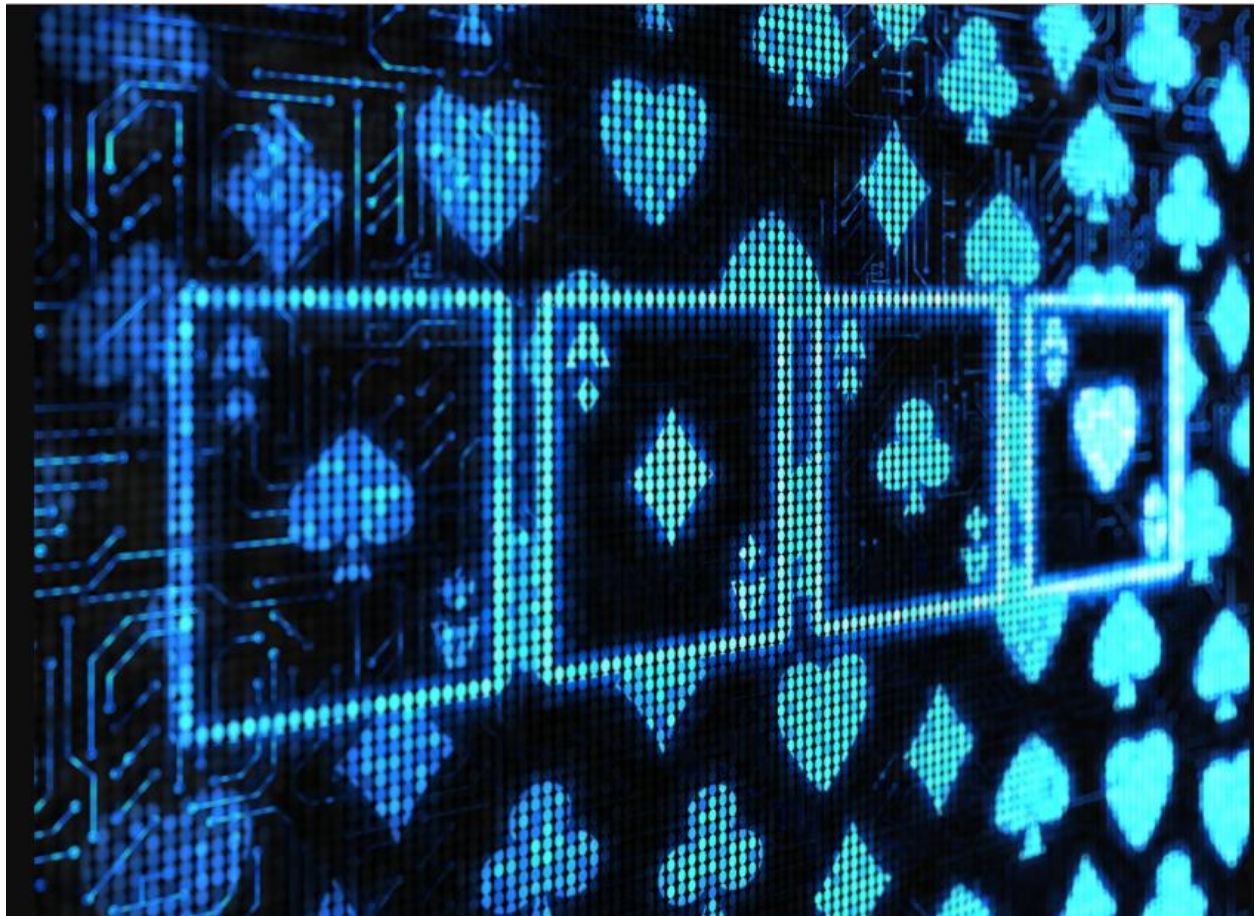

- Deal the Cards: Design a function to distribute the cards to each player, considering the number of players and the number of cards to be dealt to each player.
- Evaluate Hand Strength: Develop an algorithm to evaluate the strength of a player's hand based on the card values and combinations. Consider different hand rankings, such as pairs, flushes, and straights.

- **Make Betting Decisions:** Implement a decision-making mechanism for the AI players to determine their betting actions based on their hand strength, the current state of the game, and the actions of other players.
- **Simulate Player Actions:** Create functions to simulate player actions, including checking, betting, folding, or raising. These actions should follow the game rules and betting rounds.
- **Implement AI Strategies:** Develop intelligent AI strategies that allow the AI players to adapt their betting and decision-making based on the current game situation, opponent behavior, and calculated odds.
- **Manage Pot and Winnings:** Create mechanisms to manage the pot, including calculating the pot size, determining the winner(s) of the hand, and distributing the winnings accordingly.
- **Game Flow Control:** Design the game flow control, including managing the rounds, handling player turns, and advancing the game based on the actions taken by the players.
- **User Interface:** Develop a user-friendly interface to display the game, including the player's hand, community cards, and betting options. Provide visual feedback on the game progress and results.
- **Testing and Refinement:** Conduct thorough testing to ensure the game mechanics, AI behavior, and user interface are functioning correctly. Gather feedback and refine the game based on user experience and performance.

- Documentation and Deployment: Prepare comprehensive documentation explaining the game rules, AI algorithms, and implementation details. Package the game for deployment on the desired platform.

RESULT:

Results will be available after I complete the project.
